

# Canadian commuter e-bikes, sorted out

Seven bikes you can buy in Canada for CA\$1,699 to CA\$3,499. Every figure in this guide was read from the maker's own product page on 2026-10-08 - no remembered specs. Prices move, so confirm before you buy.

**Disclosure:** this guide was not paid for and carries no live affiliate links. Product names link to the makers' own pages. If paid partner links are ever added, they will be labelled as such.

## Which one, in one line each

### Apartment, stairs, or carrying it onto transit

**Velotric Tempo** · CA\$2,099

At 39 lb the Tempo is the lightest bike here - 7 lb under the next lightest - and light enough to ride with the motor off. The 374 Wh battery is the trade-off.

### The cheapest way in, without buying a toy

**Aventon Soltera 2.5** · CA\$1,699

Limited stock when checked

At CA\$1,699 the Soltera 2.5 is the lowest price here and still a real bike: Tektro hydraulic disc brakes, a torque sensor and lights front and rear, UL 2849 / UL 2271 certified. Its 345.6 Wh battery is the honest limit: short, light trips.

### The longest commute on one charge

**Surface 604 Rook** · CA\$2,699

Out of stock when checked

The Rook carries the biggest battery here (960 Wh) and claims the longest range of any bike on this page: up to 150 km in eco. It is also the only bike here that ships at Class 3.

### The best all-round daily commuter

**Velotric Discover 3** · CA\$2,699

750 W is the highest motor rating in this set, and its 730 Wh battery is the second biggest - behind only the Rook's 960 Wh - with lights, fenders and a rack included.

### The lowest-priced Rad Power bike here

**Rad Power Bikes RadKick 7-Speed** · CA\$1,899

At CA\$1,899 the RadKick 7-Speed still has hydraulic brakes and a rear rack included, and it is the lightest Rad on this page. Its 40 Nm is the least torque here and its 360 Wh battery is the honest limit: short trips only.

### A bike that feels like a bike, on a long mixed commute

**Rad Power Bikes Radster Road** · CA\$2,699

The Radster Road pairs a torque sensor with a 100 Nm motor, so the assist follows your pedalling instead of pushing you. It is the heaviest bike here.

## The premium step-through commuter

OHM Cruise 3 • CA\$3,499

In stock when checked

CA\$3,499 buys a Shimano E7000 system with 60 Nm, a 504 Wh in-tube battery, a 2-year warranty and 30-day returns, from a maker that has designed in North Vancouver since 2005. The dearest bike here; the maker sells it on comfort rather than speed.

## The comparison

Cheapest to dearest; equal-price bikes A-Z. Claimed range is the maker's estimate, not a test. Weight is the maker's figure. Where a maker does not publish a figure, the cell says so.

| Model                                                       | Price (CAD) | Motor                                  | Torque | Battery                            | Claimed range                         | Weight            | Brakes                                                      | Class                                           | Warranty                           |

*Cheapest is not the same as best value: the Soltera 2.5 costs the least but carries the smallest battery here. Match the battery to your round-trip distance, not the price tag.*

## Which one for which household

### Aventon Soltera 2.5 · CA\$1,699

A flat-city commuter on the lowest budget here: at 46 lb it is light, and it still carries hydraulic disc brakes, a torque sensor and front and rear lights. The 345.6 Wh battery and the maker's own Eco-mode range figure suit short, light trips rather than long ones.

Source: <https://www.aventon.com/en-ca/products/soltera-2-5-ebike> (checked 2026-10-08).

### Rad Power Bikes RadKick 7-Speed · CA\$1,899

Short trips and stairs: Rad's lightest bike at 55 lb, with a rear rack rated 55 lb. The small 360 Wh battery is the trade-off - it is the shortest-range bike in this set.

Source: <https://radpowerbikes.ca/products/radkick-7-speed-electric-lightweight-bike> (checked 2026-10-08).

### Velotric Tempo · CA\$2,099

Carrying-up-stairs and mixed bike/motor use: at 39 lb it is by far the lightest here, and light enough to ride with the motor off. The 374 Wh battery is the smallest, so plan short hops or charge often.

Source: <https://www.velotric.ca/products/velotric-tempo-ebike> (checked 2026-10-08).

### Velotric Discover 3 · CA\$2,699

The all-round daily commuter: a 750 W motor, a 730 Wh battery and the second-longest claimed range here (~129 km of pedal assist), with lights, fenders and a rear rack included. It ships as Class 2; Class 3 (28 mph) is unlocked in the app where local rules allow.

Source: <https://www.velotric.ca/products/discover-3> (checked 2026-10-08).

### Rad Power Bikes Radster Road · CA\$2,699

A long, bike-feeling commute: the torque sensor and 100 Nm motor make pedalling feel assisted rather than motorised. It is the heaviest bike here, so it suits a garage or ground-floor lock-up.

Source: <https://radpowerbikes.ca/products/radster-road-electric-commuter-bike> (checked 2026-10-08).

## Surface 604 Rook · CA\$2,699

The long-haul, high-speed pick: the biggest battery here (960 Wh) and the only bike in this set that ships at Class 3, with a 45 km/h claimed top speed. Vancouver-designed, with a 5-year frame warranty. It was Out of Stock when checked.

Source: <https://www.surface604bikes.com/electric-bikes/rook> (checked 2026-10-08).

## OHM Cruise 3 · CA\$3,499

The comfort-first step-through: an upright position, a Shimano E7000 system with 60 Nm, and a maker that has designed in North Vancouver since 2005 and states a 10-year parts guarantee. It is also the dearest bike on this page.

# Where every number comes from

Each bike below links to the exact page the figures were read from, on 2026-10-08.

**Aventon Soltera 2.5** - <https://www.aventon.com/en-ca/products/soltera-2-5-ebike>

Technical Specifications panel and the feature strip on Aventon's Canadian (en-ca) product page, read 2026-10-08: Speed Class 2, 36 V 350 W sustained / 540 W peak brushless hub motor, Motor Torque 45 Nm, battery 36 V 9.6 Ah (345.6 Wh) with LG cells, Sensors 'Double Sided Bottom Bracket Torque Sensor', Weight 46 lbs, Total Weight Limit 300 lbs, front and rear brake Tektro HD-T280 hydraulic disc with 180 mm rotors, Pedal Assist 4 levels, Front and rear lights integrated, UL 2849 / UL 2271 certified, and the page's own '2 Year Warranty' badge. Range is published as 'Up to 46 Miles' with the page's own footnote: 'Max range is estimated based on a rider weighing 165 lbs (75 kg) on a paved, flat road, in Eco Mode, with Ride Tune set to the default settings.' The miles figure is converted at 1 mi = 1.609344 km and shown as both. Price is the CA\$1,699.00 shown on the en-ca page (variants at 169900). Stock wording seen on the page: 'Limited stock available. Order today.'

**Rad Power Bikes RadKick 7-Speed** - <https://radpowerbikes.ca/products/radkick-7-speed-electric-lightweight-bike>

Technical Specifications / Geometry blocks on the product page (UL-2271 battery). Price from the product's Shopify .js endpoint, CAD. Re-read 2026-10-08: CA\$1,899.00 CAD, in stock, 55 lb (25.2 kg), 40 Nm, 300 lb (136 kg) / 275 lb rider, 10 Ah 360 Wh, Class 2.

**Velotric Tempo** - <https://www.velotric.ca/products/velotric-tempo-ebike>

Key Features block and the Specification & Geometry table on the product page. Price shown as CA\$2,099.00 CAD on the product page. Re-read 2026-10-08: the spec table now publishes Ebike Class 1/2/3 (default 32 km/h, adjustable 19-45) and Max Bike Load Capacity 150 kg, so those cells are no longer 'not stated'.

**Velotric Discover 3** - <https://www.velotric.ca/products/discover-3>

Specification & Geometry table on the product page. Price shown as CA\$2,699.00 CAD (confirmed in the page's JSON-LD, priceCurrency CAD). Re-read 2026-10-08: Bike Weight now listed as 28 kg; 750 W / 1,100 W peak / 75 Nm, 15.2 Ah 730 Wh, 200 kg max load / 30 kg rack, PAS range 129 km; no sale price on the page.

**Rad Power Bikes Radster Road** - <https://radpowerbikes.ca/products/radster-road-electric-commuter-bike>

Technical Specifications block on the product page (Samsung 50GB / LG M50LT cells, UL 2271). Price from the product's Shopify .js endpoint, CAD. Re-read 2026-10-08: CA\$2,699.00 CAD, in stock, Reg. 74.5 lb (33.8 kg), 100 Nm, 320 lb (145 kg) / 290 lb rider, 15 Ah 720 Wh.

**Surface 604 Rook** - <https://www.surface604bikes.com/electric-bikes/rook>

Product page and its Specifications tab (motor, torque, battery, class, brakes, weight, weight capacity, warranty). Price shown as CA\$2,699.00 (page JSON-LD: priceCurrency CAD). This model showed Out of Stock on the date checked. Re-read 2026-10-08: the Specifications tab now publishes 500 W (peaks at 750 W) Bafang geared hub, 65 Nm, net weight 27.75 kg / 61 lb, and weight capacity 300 lb (136 kg).

**OHM Cruise 3** - <https://www.ohmcycles.com/products/cruise-3>

Technical Specifications accordion and the Bike Details tab on OHM's own product page, read 2026-10-08: Motor 'Shimano E7000, 250W continuous / 500W peak, 60Nm', Battery '504Wh, Li-ion, In-tube, State of Charge Display', Speed Assist '32 km/h (Canada)\*' with the page's own footnote ('Motor is rated at 250W continuous output - the legally relevant figure under Canada's federal PAB regulations (500W max). Peak power rating reflects momentary output under load. Speed assist is firmware-configured to 32 km/h for Canadian compliance (28 mph available for US Class 3 regions)'), Brakes 'Shimano MT-420, Quad Piston, Hydraulic Disc' with 180 mm front / 160 mm rear rotors, Frame 'Premium Hydroformed Aluminium, Step-Through', and the page's own '2-Year Warranty' badge. Bike Details: Weight 22.2 kg (49 lb), MSRP \$3,499 CAD. The 100 km figure is published in the product page's own summary text ('Shimano E7000, 60 Nm torque, 100 km range'); the specification table itself publishes no range figure and names no assist level, so the figure is labelled as coming from the page summary. The same page's FAQ answers 'Is it heavy?' with 52 lbs while the Bike Details tab says 22.2 kg (49 lb); the tab figure is the one used here. Price CA\$3,499.00 CAD (Shopify product data; storefront currency CAD), 'Add to cart' enabled and no variant flagged sold out. The product page's own name is 'Cruise'; its URL, the maker's comparison page and its city collection call it Cruise 3.

*Two caveats worth naming. Claimed range is the maker's figure and depends on rider weight, hills, temperature and assist level. Weight is the maker's figure too. Where a maker does not publish a figure on the page we read, this guide says so rather than guessing. This is general product information, not advice about your riding or your province's e-bike rules - check those before you buy.*
